Site is something ~~new~~ that is curving ~~big~~^{or rounded} big
more horizontal than vertical. but has a strong down
component. Below is a feeling of energetics + narrowness.
I couldn't get a handle on the type of energetics though
it made me feel creepy like my hair standing on end.

SGT SESSION COMMENTARY
19 OCTOBER 1987 AM

I have to start placing demands on the system in particular inserting a time delay before the formation of the ideogram. It only makes sense that if the monitor can place demands on the system so can the viewer--viewing by no means is a passive process.

I am having trouble with stage 1 this week, so it's time to review the basics. It is important to decode the feeling component correctly as either hard, soft, liquid, airy, energetics, or man-made. As stated in earlier commentaries, an incorrect stage 1 decoding leads to confusion and or system breakdown in stage 2. I need to make sure I have properly decoded the site gestalt(s)-as evidenced by non-repeating ideograms-before moving on to stage 2. I also need to demand that the system provide more stage 2s and that these appear in organized clusters. *From A "B" need not be declared unless it is obvious & obvious (ie land). If a B is declared incorrectly (ie B. structure for something that is man-made & not a structure) the problems associated with incorrect stage 1 decoding will result. Better no B than a wrong B.*
